Project Car Dealership system:

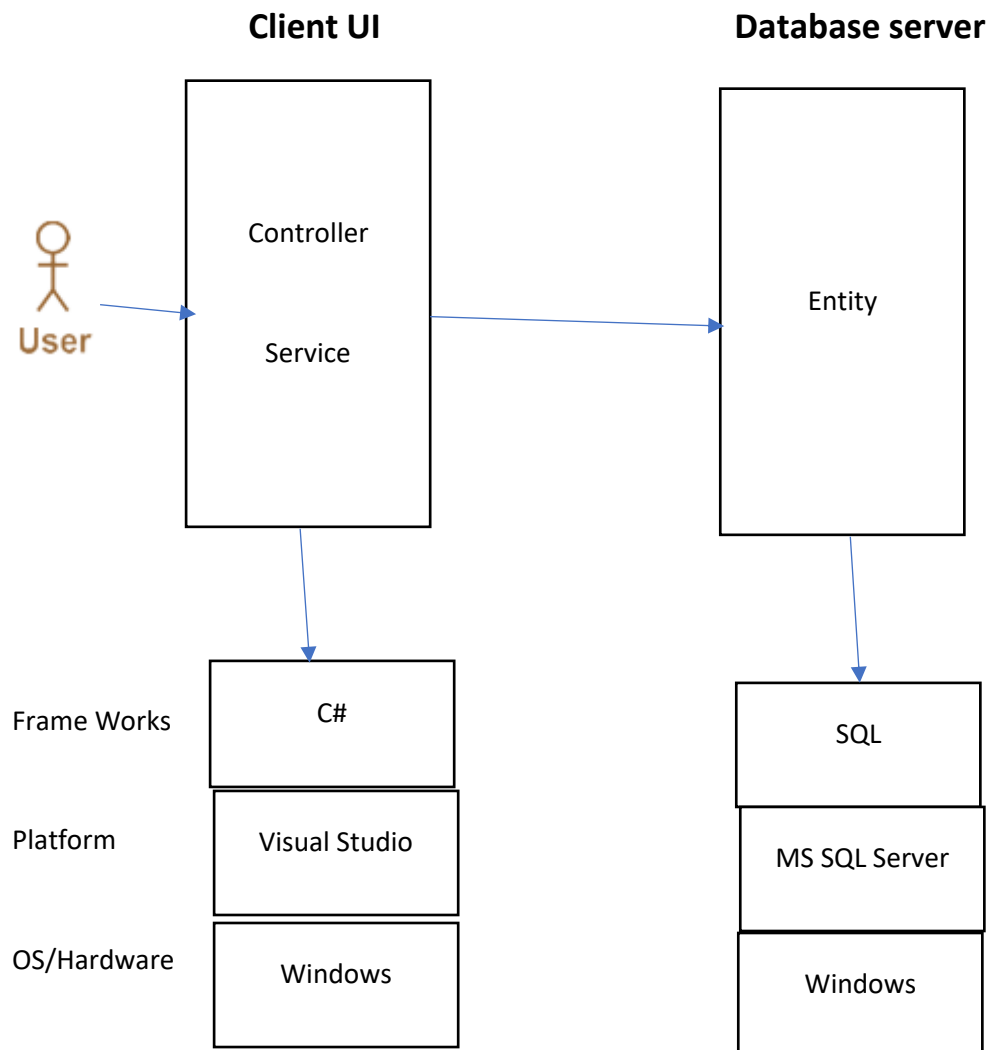

Sprint 1

Elaboration phase

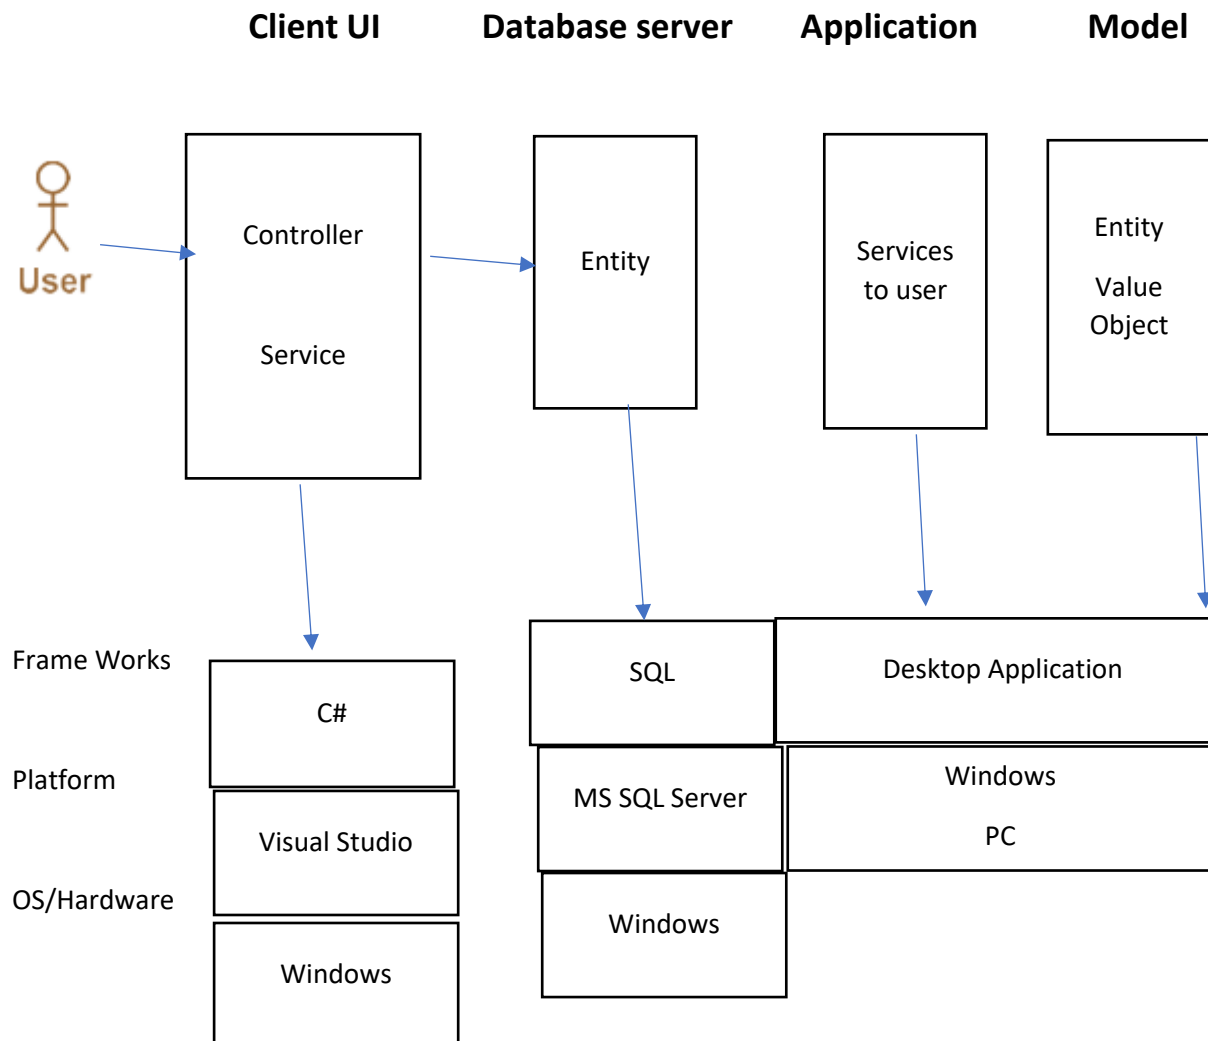

Contents:

- Project Architecture
- Domain Drive design
- State based behavior
- Implementation on sql server

Project Architecture:

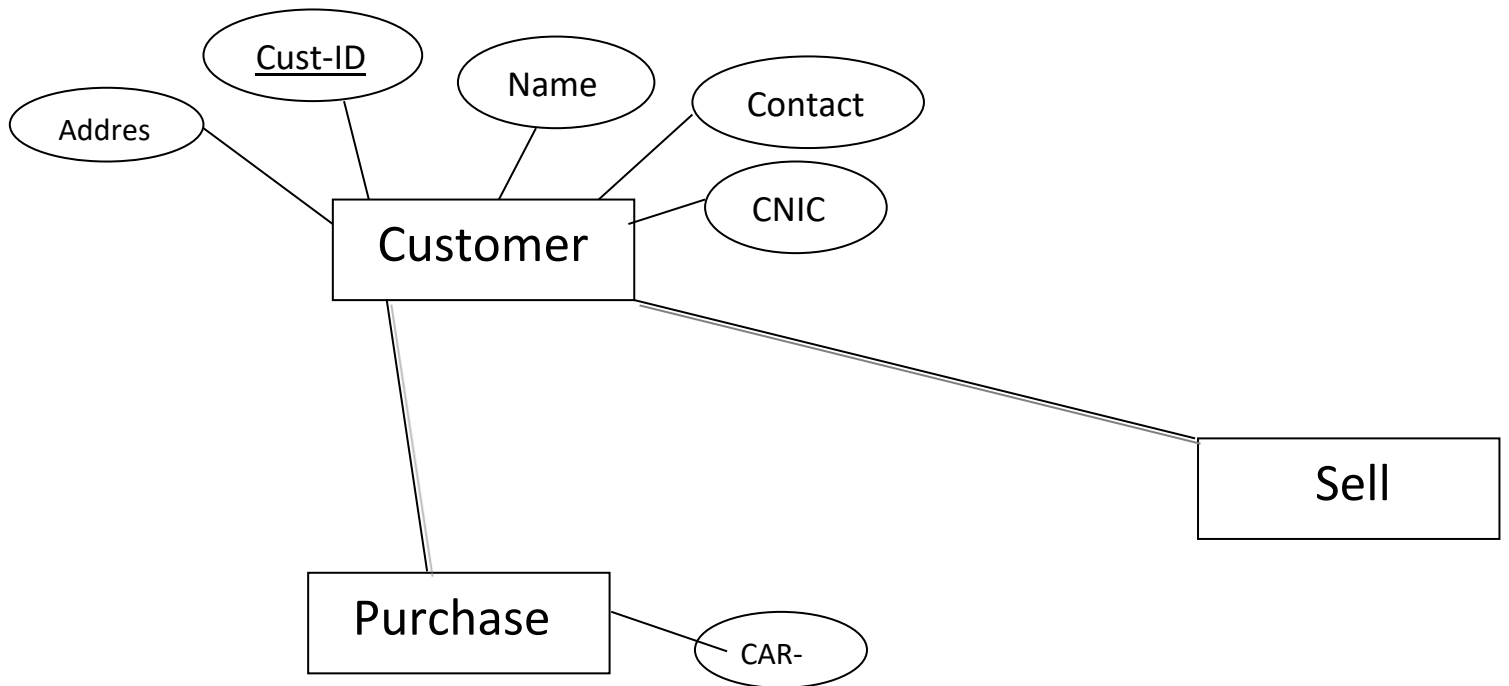

Domain Driven Design:

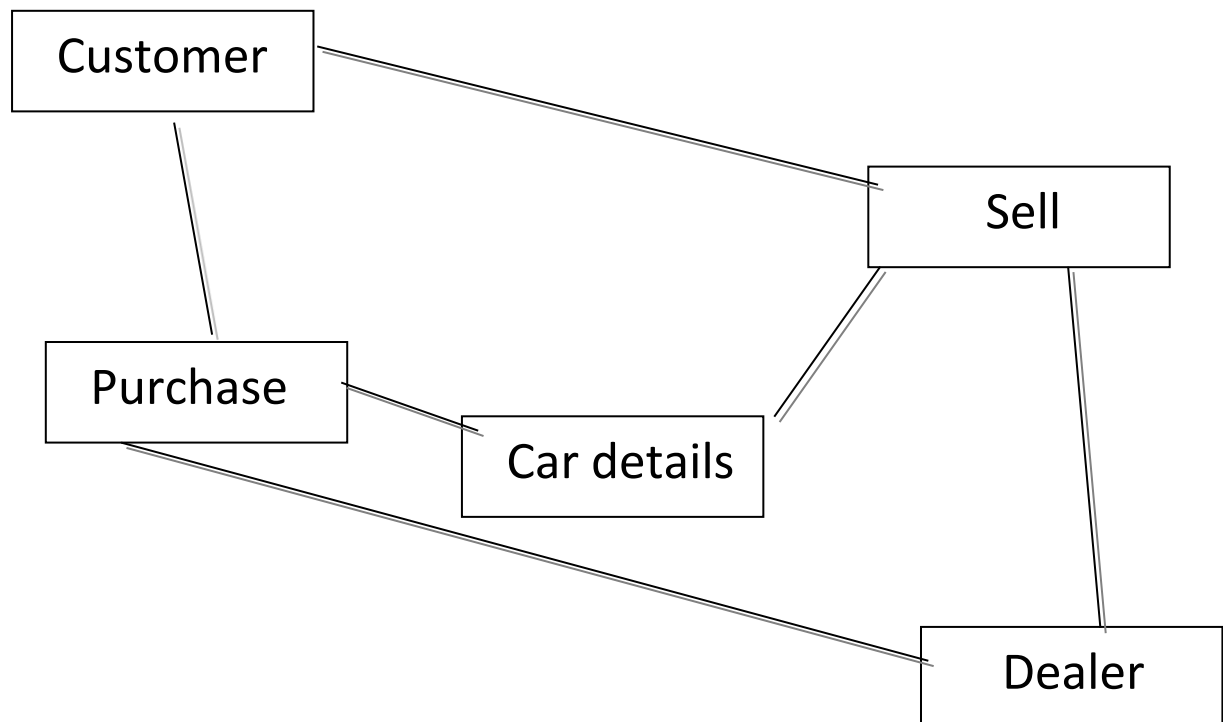

Domain Driven Design:

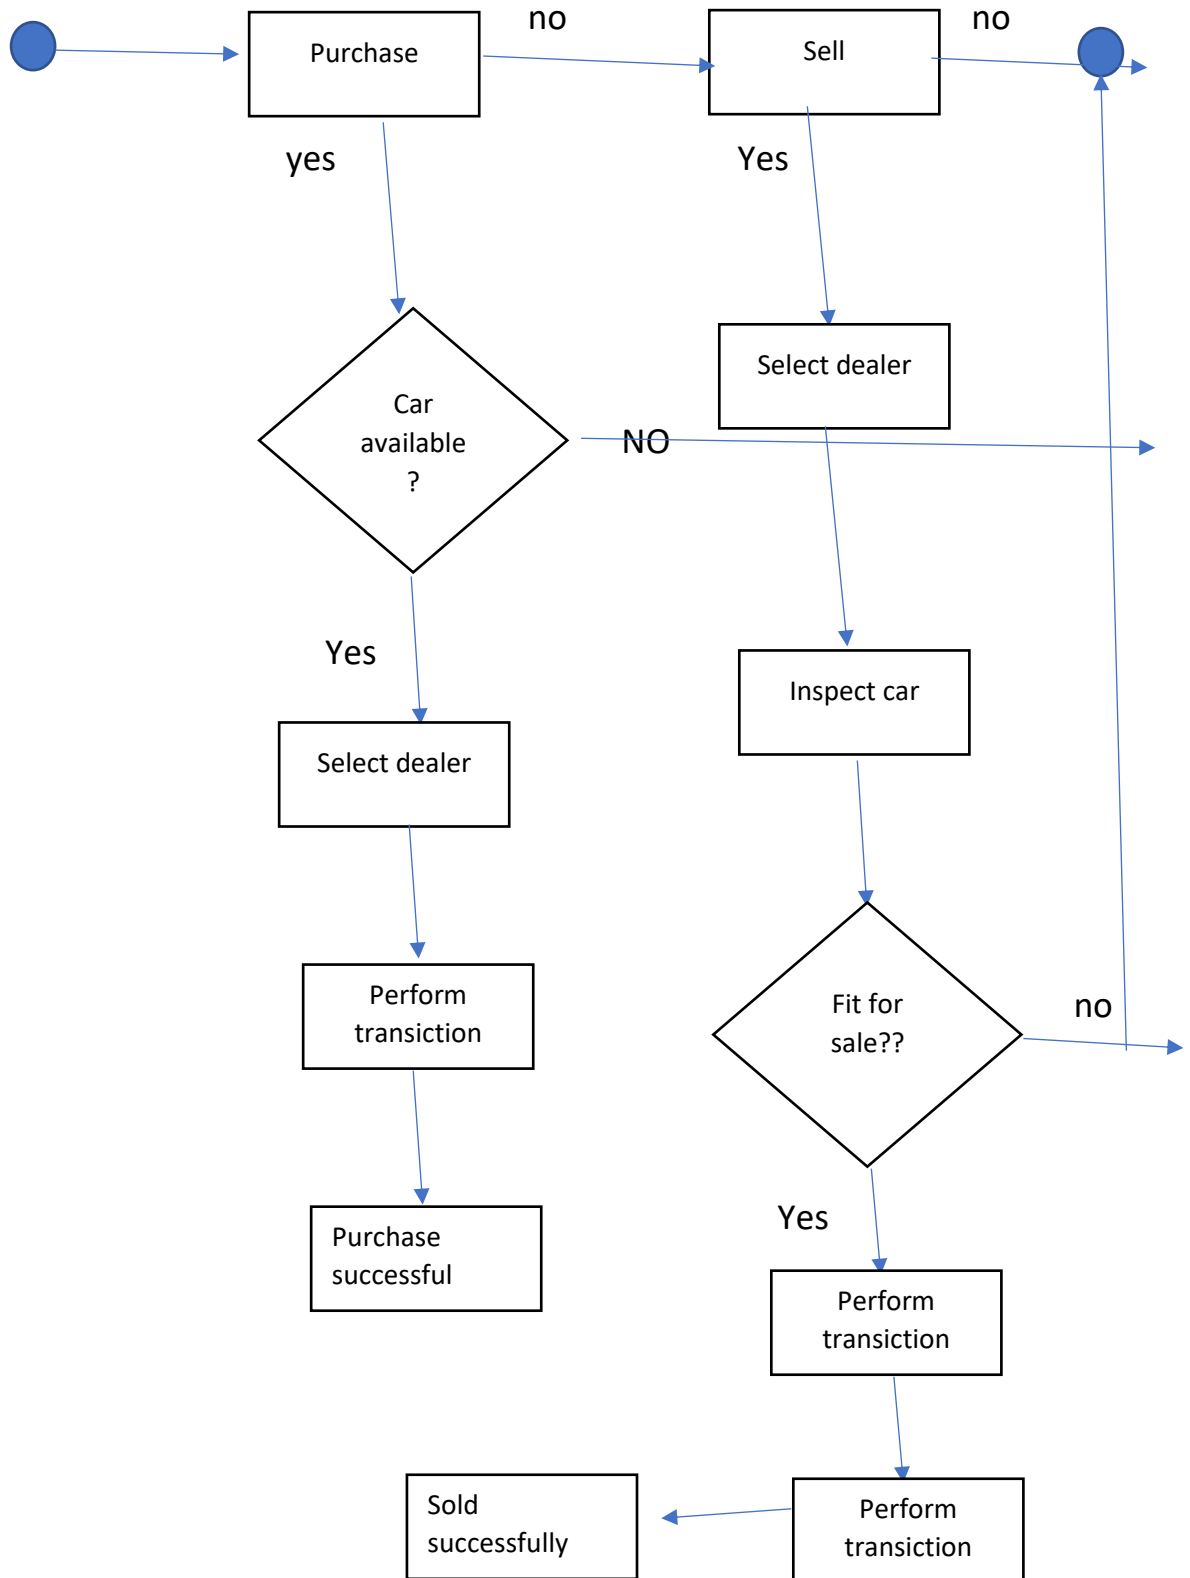

Application:

Model:

State based behavior:

Implementation:

Stored procedures:

Insert:

```
create procedure cust_insert
(
    @id int,
    @name nchar(50),
    @contact bigint,
    @cnic bigint,
    @address varchar(50),
    @statement nvarchar(10)="
)
as
begin
    if @statement= 'insert'
        insert into dbo.customer (id,name,contact,cnic,address)
        values (@id,@name,@contact,@cnic,@address)
end
```

update:

begin

if @statement='update'

update customer

set name=@name, contact=@contact, cnic=@cnic, address=@address

where id=@id

end

Delete:

begin

if @statement='delete'

delete from customers

where id=@id

end

Stored procedures call:

go

execute dbo.cust_insert 6,'waqar',423432,324322,'efrewre','insert'

execute dbo.cust_insert 5,'waqar',423432,324322,'multan','update'

execute dbo.cust_insert 4,'waqar',423432,324322,'multan','delete'

Triggers:

This trigger is used in purchase. It checks that whether the required call is available or not.

```
create trigger CARCHECKTRG ON [dbo].[sale]
```

```
instead of insert
```

```
AS
```

```
Begin
```

```
    declare @customerid int;
```

```
    declare @carid int;
```

```
    declare @cid INT
```

```
    declare @price int
```

```
    SELECT @carid=car_id from inserted
```

```
    SELECT @cid=car_id from Purchase
```

```
    IF (@cid != @carid)
```

```
    BEGIN
```

```
        print 'Car is not available'
```

```
        return
```

```
    END
```

```
END
```

```
insert into [dbo].[sale] values(111,2,2,345)
```
